Effects studies Early effects scholars “Powerful effects” theory Walter Lippmann, Public Opinion Harold. Published by Stephen Riley Modified over 3 years ago. Embed. 10 Media violence as negative Aggressive stimulation theory –Albert Bandura’s studies in 1960s –Zamora case –Bundy case –Deer Hunter cases Catalytic theory-Schramm, Lyle, Parker -for some children under some conditions. 11 George Gerbner’s “Mean World Syndrome” Societally debilitating effects of violence –media world is more dangerous real world –desensitizing theory--more violence is necessary to make an impact –Gerbner Index since 1970s –30,000 murders, 40,000 attempted murders seen on TV by age 18 –give up freedom for personal safety. The media influences society to perform a particular action; yet the leader’s power will determine whether society will perform that action or not. Symbolic interactionism represents media through social studies (Webster, J., & Trevino, L. K. (1995). Further to that, we also need to study how the public consumes or evaluates media products. Audience members may understand media messages in ways other than those intended by the producer. Mass media is a tool that can cause great change and impact on society mostly. Although the mass media has afforded society negative instances, there are several high points that can be taken away from the existence of the media. Can media content affect deep-seated decisions like fertility choices? Is there consistent evidence of imitation of media behaviour? We stress that there are two main sources of variation of media effects in this entertainment setting. The first is a shock to the entertainment value of a channel, or to its cost, which affects the audience for that particular medium. A more recent set of studies takes stock of the primacy of demand for entertainment for policy purposes, and takes it one step further – why not attempt to incorporate policy goals into the entertainment material? The parallel with advertising is clear – marketing companies have for decades used product placement to sell products, suggesting a natural path for the use of entertainment to ‘sell’ policies.
