Current Obstetric and Gynecologic Diagnosis and Treatment

Thomas Julian

Abstract

The most notable changes in this new edition of Current Obstetric and Gynecologic Diagnosis and Treatment are in its organization. It now consists of seven sections covering the basic science of reproduction, normal obstetrics, high-risk obstetrics, general gynecology, gynecologic oncology, endocrinology and infertility, and miscellaneous topics. The table of contents includes more subheadings. The index has been expanded from 32 to 50 pages, delineates with bold-face type major discussions of a topic, and uses "t" and "i" notations to identify tables and illustrations. These changes make the book a more effective reference.

Chapters have been rearranged and combined, making this ...

All sexual partners of the patient should be notified and treated promptly. The effects of untreated cervicitis in pregnant women and neonates can be minimized by the screening and prompt treatment of high-risk pregnant women when they are seen for prenatal care. Administration of erythromycin ointment or silver nitrate drops to neonates is an important step in prophylaxis against ophthalmia neonatorum.
