Content management for the virtual library
Content Management For The Virtual Library

Ed Salazar

Abstract

Traditional, larger libraries can rely on their physical collection, coffee shops, and study rooms as ways to entice patrons into their library. Yet virtual libraries merely have their online presence to attract students to resources. This can only be achieved by providing a fully functional site that is well designed and organized, allowing patrons to navigate and locate information easily. One such technology significantly improving the overall usefulness of Web sites is a content management system (CMS). Although the CMS is not a novel technology per se, it is a technology smaller libraries cannot afford to ignore. In the fall of 2004, the Northcentral University Electronic Learning Resources Center (ELRC), a small, virtual library, moved from a static to a database-driven Web site. This article explains the importance of a CMS for the virtual or smaller library and describes the methodology used by ELRC to complete the project.

SCImago Journal & Country Rank data for ITAL
The Destination Library Details screen refreshes, and the message, "Scan of destination library successfully scheduled" displays. Editing the Management URL. In order to view the management software for a SAN destination library from the Automigration interface, provide the destination library URL: 1. Content on the NVL is managed using an off-the-shelf content management system and an in-house SQL database. Together these systems provide a seamless interface for NVL users, while allowing ISD staff to easily and quickly create and edit web pages. This presentation will describe the team effort of Reference Services staff and Information Technology staff in designing, populating, implementing and maintaining these systems, as well as the training process that allows almost 20 ISD staff members to have ownership of various sections of the NVL.
