Glenn Lewis
Tags provide a useful way to group related posts together and to quickly tell readers what a post is about. Tags also make it easier for people to find your content. Tags are similar to, but more specific than, categories. The use of tags is completely optional. Sometimes there just aren't 5 relevant tags. Tag's can take seconds, or can use multiple colors. Two color tags are usually throw ups, may consist of block or bubble lettering. Bombs are usually tri color, while piecing pieces are always of the upper most complexity. Very large, good use of colors, where they will seem to blend together, or bleed, and burn. HTML Tags Ordered Alphabetically. = New in HTML5. Tag. Description. Defines a comment. . Defines the document type. . Defines a hyperlink.
