The Present Situation and Development of Division Hospitals in Southern War Zone

LIU Ruo-yy, ZHOU Zeng-huan, LV Jun, CHEN Ming-bin (Nanfang Medical University, Guangzhou 510515, China)

To explore how army-forces division hospitals can develop military strategies in the new era, meet the missions of army forces and win local hi-tech wars, so that the hospitals and army forces can develop at the same pace. Considering the specificity of division hospitals, our suggestions on strengthening the construction of division hospitals are as follows: reinforcing the leadership of the hospitals, enhancing construction of talented personnel and armed equipment, and cultivating experienced medical personnel who can fulfill health needs in war time.

**Situational analysis:** involves assessing the present situation and includes: current and projected demographic characteristics of the population, physical and socio-economic characteristics of the area and its infrastructure. Evaluation: provides the basis for the next situation analysis and is an integral component of the process. Reflection upon whether the process has enhanced joint working, the needs analysis has been sufficiently appropriate and comprehensive and if there are any gaps or areas of concern that need further analysis.
