The two most well read professionals in the medieval “town” would have been the scholar and the architect. The scholar commonly a cleric devoted his life to writing and teaching. Gothic architecture evolved at a time of profound social and economic change in Western Europe. In the late eleventh and twelfth centuries trade and industry were revived, particularly in northern Italy and Flanders, and a lively commerce brought about better communications, not only between neighboring towns but also between far distant regions. Politically, the twelfth century was also the time of the expansion and consolidation of the State. Feltham: The Hamlyn Publishing Group, 1968. Panofsky, E. Gothic Architecture and Scholasticism.
