Conservation status of freshwater mussels of the United States and Canada
Feature: Endangered Species. Conservation Status of Imperiled North American Freshwater and Diadromous Fishes. Abstract: This is the third compilation of imperiled (i.e., endangered, threatened, vulnerable) plus extinct freshwater and diadromous fishes of North America prepared by the American Fisheries Society’s Endangered Species Committee. Since the last revision in 1989, imperilment of inland fishes has increased substantially. the AFS-ESC to compare imperiled taxa captive populations in the United States and numbers of imperiled fishes (Figure 3): the. with nominal species by family. The propor- Mexico (Miller et al. 2005). The High Rock southeastern United States, with many.
