Sustainable design technology: A case study of a master student's lamp project

Abstract
Creatively treated materials from nature transform, through technological processes and design practice, into cultural objects containing function and meaning. Views on nature, culture, and technology are gradually in a process of change and thus contribute to new practices. Multidisciplinary, innovative thinking within the Norwegian forestry industry has led to new, aesthetic experiences in nature that might influence product-design thinking. Forestry business with complex technologies has been linked in various ways to the built environment, architecture, and design. The research question of this study was: how sustainable products can be developed through an innovative combination of nature, culture, and technology in a master student project? This was illustrated through a case study of a master student’s development of a lamp design. The product included semantic references to old woodworking techniques and cultural heritage, and evolved to an innovative product with commercial success. Methods used were document analysis and participatory observation. The product has contributed to a marketing strategy of corporate, social responsibility for the Forest Owners’ Association. Students can get an expanded view of how design practice can be seen as an integral part of a sustainable worldview that includes both self-realisation and commercial realism. The learning outcomes from this study are related to knowledge, skills, and general competence.

Learning by watching Vernacular Inupiaq-Inuit design learning as inspiration for design education
Reitan, Janne Beate (Høgskolen i Oslo og Akershus, 2014)
In this article , I explore a single case of vernacular clothing design — the practice and learning of design for contemporary Iñupiaq - Inuit clothing made by women from Kaktovik in North ern Alaska — and ...

Increasing police trustworthiness through a user-oriented design approach
Moen, Bente; Fosse, Jarle; Berg, Arild (The Design Society, 2014)
This study addresses the research question of how product design can enhance and strengthen the general public’s positive perceptions of the police in Norway. Product design expertise can be used to gain valuable insight ...

Twenty five years of training and education in ICT Design for All and Assistive Technology
Whitney, Gill; Keith, Suzette; Bühler, Christian; Hewer, Sue; Lhotska, Lenka; Miesenberger, Klaus; Sandnes, Frode Eika; Stephanidis, Constantine; Velasco, Carlos A. (IOS Press, 2011-07-20)
Over the last twenty to twenty-five years 'Design for All' principles and practices including Assistive Technologies have been collected into formal and informal courses which have been used to train designers of Information ...
The Master of Design Studies is delivered in an innovative distance format that allows students to work full time while they study. The BAC uses a range of digital tools to support and enhance online learning, including Skype, VoiceThread, and WebEx desktop sharing. Students can study from anywhere in the world, working at their own pace and on their own schedule. Students contribute to a vital online studio culture, exchanging comments and critiques with colleagues, working together on projects, and supporting each other throughout the program. Students can continue to advance their careers w
