Abstract
Nazi Germany invaded the Soviet Union on 22 June 1941. Hitler's plan to annihilate Germany's Eastern neighbor and populate the vast Russian expanse with his own people was as ambitious as it was adventurist. Although it began successful, the Russo-German War quickly devolved into a quagmire as Russian troops outfought their German opponent and beat them back to Berlin. Contrary to prevailing historiography, the Wehrmacht's loss on the Eastern Front cannot be solely attributed to a failure to equip German troops with proper winter clothing, an inadequate logistics network or Hitler's interference in military decisions. For an army that had enjoyed rapid gains during late 1930s and 1940, only an enhanced tactical revolution, superior armor and a more aggressive martial ethos explains how the vaunted German military suffered ignominious defeat at the hands of what many consider a third-rate adversary.

Of the 13.6 million German soldiers who were killed, wounded or captured during the Second War War, 10 million ended their military careers on the eastern front. Peter Kuznick, Associate Professor of History at American University, similarly notes, at 5:44 in the following video, "Throughout most of World War II, the United States and the British were fighting 10 German divisions combined. The Soviets were fighting 200.” The historical reality of World War II is that the USSR overwhelmingly defeated the Nazis. Even the colonialist, racist, anti-communist Churchill had to admit to this. —Winston Churchill, Speech in the House of Commons, 2 August 1944, “War Situation”. and. The war in the Pacific does not parallel the war in Europe or even the Russo-German war on the Eastern Front. Into the Rising Sun. In his important examination of the Wehrmacht's war against Soviet partisans (among the most gruesome facets of the Russo-German conflict, in which neither side gave any quarter, and in which up to 300,000 Soviets, mostly civilians, were killed) Shepherd largely confirms Bartov's general conclusions but adds layers of nuance and shades of (dark) gray.
