Apley's System's wide readership of practicing orthopaedic surgeons, postgraduate trainees and residents in orthopaedics and general surgery, A&E specialists, and physiotherapists is evidence of the authors' ability to instruct and inspire. The book is a truly fitting introduction to modern-day orthopaedics. Apley's textbook has always emphasised clinical features and the principles of treatment and this edition is no different. The chapter on orthopaedic operations now includes the principles of osteotomy and elastic nailing for paediatric fractures. The management of major injuries is described comprehensively as trauma is a major component of orthopaedic surgery. In addition to urgent debridement and fracture stabilisation, antibiotics for not more than 72 hours and early definitive wound cover in collaboration with plastic surgery is advocated in the treatment of open fractures.

Botulinum tox Alan Graham Apley FRCS (10 November 1914, London – 20 December 1996) was a British orthopaedic surgeon and educator known for his textbook, Apley's System of Orthopaedics and Fractures, and for the Apley grind test in meniscal injury. Alan Apley was born in London in 1914, the youngest son of Polish Jewish immigrants. He studied medicine at University College Hospital, qualifying MBBS in 1938. He became a Fellow of the Royal College of Surgeons in 1941.

Title: Apley's System of Orthopaedics and Fractures; Ninth edition.

Authors: Solomon, Louis
Warwick, David
Nayagam, Selvadurai

Keywords: Medicine; Orthopaedics; Joint Injuries; Fractures

Issue Date: 2010

Publisher: Hodder Arnold

Since the publication of the first edition in 1959, Apley's System of Orthopaedics and Fractures has been an essential textbook for those seeking to understand the structure and function of the musculoskeletal system, its diseases, and its response to trauma. As the leading textbook of modern orthopaedics for over 50 years, this book is a testament to the late Alan Apley's skills as a teacher, and the care and forethought he brought to the presentation of the content. The current authors have developed and extended this foundation to produce a thoroughly modern textbook of orthopaedic surgery, bringing contemporary expertise while retaining the book's characteristic philosophy and approach. They are joined by a selection of expert contributors from around the world who provide added material on a wide variety of subjects—including radiology, open fractures, neuromuscular disorders, and inflammatory arthropathies. This ninth edition echoes its predecessors in following Apley's approach to the orthopaedic patient. As before, the work is divided into three sections: General Orthopaedics, Regional Orthopaedics, and Fractures and Joint Injuries. The material has been fully updated and revised and includes more than 1,000 illustrations. Apley's System's wide readership of practicing orthopaedic surgeons, postgraduate trainees and residents in orthopaedics and general surgery, A&E specialists, and physiotherapists is evidence of the authors' ability to instruct and inspire. The book is a truly fitting introduction to modern-day orthopaedics.

Description: 971p.
Apley's System's wide readership of practicing orthopaedic surgeons, postgraduate trainees and residents in orthopaedics and general surgery, A&E specialists, and physiotherapists is evidence of the authors' ability to instruct and inspire. The book is a truly fitting introduction to modern-day orthopaedics. Apley's textbook has always emphasised clinical features and the principles of treatment and this edition is no different. The chapter on orthopaedic operations now includes the principles of osteotomy and elastic nailing for paediatric fractures. The management of major injuries is described comprehensively as trauma is a major component of orthopaedic surgery. In addition to urgent debridement and, fracture stabilisation, antibiotics for not more than 72 hours and early definitive wound cover in collaboration with plastic surgery is advocated in the treatment of open fractures. Botulinum tox Alan Graham Apley FRCS (10 November 1914, London – 20 December 1996) was a British orthopaedic surgeon and educator known for his textbook, Apley's System of Orthopaedics and Fractures, and for the Apley grind test in meniscal injury. Alan Apley was born in London in 1914, the youngest son of Polish Jewish immigrants. He studied medicine at University College Hospital, qualifying MBBS in 1938. He became a Fellow of the Royal College of Surgeons in 1941.
