Technology was once thought of only in relation to machines, manufacturing or the military. Now it pervades every aspect of our lives. In Technoculture, Lelia Green focuses on the technologies of communication, from things we don’t even think of as technology, like the alphabet or electricity, to the rapidly-developing world of cyberspace. She argues that technology is never neutral, rather, it is closely linked to culture, society and government policy.

Green looks at what drives technological change, and demonstrates that the adoption of new technologies is never inevitable. She also explores how a variety of technology cultures coexist and interact: industrial culture, media culture, information culture, and now ‘technoculture’. Some communities reap the benefits of technocultures, while others are bypassed or even damaged. Technoculture offers a broad and accessible introduction to the complex issues surrounding technology, communications, culture and society for students and anyone else interested in making sense of one of the key issues of the twenty-first century.

Cyber sex-pests and abusers could go to prison, the police said on the legal framework of the country as a result of decades of military Australian and Filipina arrested for cybersex racket - Asia Times. http://www.atimes.com/article/australian-and-filipina-arrested-for-cybersex-racket/. 18 Sep 2018 An Australian man and his Filipina partner have been arrested for running an alleged cybersex den in Iloilo in the Philippines. On Saturday
