The Contraceptive Revolution

Charles F Westoff Norman B. Ryder Princeton University

Carl Djerassi, who died recently aged 91, has been honoured globally for his work. In his remarkable career he also did pioneering work with antihistamines and topical corticosteroids for inflammation, but it is for his work on the pill that he is rightly world famous: he and his team were the first to synthesise a hormone instrumental to the creation of the oral contraceptive pill as we know it. Women in control. Birth control innovations have had a remarkable impact on modern societies in the past five decades. Hannaford, P & Belfield, T 2009, ‘The contraceptive revolution: some excellent progress but work still to be done’ The British Journal of General Practice, vol. 59, no. 558, pp. 4-6. @article{cb3efd9e72914c95af9e482c25d393a6, title = "The contraceptive revolution: some excellent progress but work still to be done", keywords = "practitioners oral-contraception, collaborative reanalysis, hormonal contraception , individual data, ovarian-cancer, royal-college, women, cohort, risk, mortality" 1 edition of The contraceptive revolution found in the catalog.
