Würfel-Kosmologie ↔ Kugel-Kosmologie

Ehe Christopher Columbus 1492 in der Neuen Welt landete, gab es das Weltbild der Schildkröteninsel Nordamerikas zu vereinnahmen begannen, wurde die Vorgehensweise des Quadrat/Würfel-Paradigmas. Die Kiste, in der sich die weißen Eroberer vorwiegend aufhielten, besteht aus vier fensterlosen Wänden ohne eine Tür. Auch der Boden und die Decke boten weder Zugang noch Ausblick in die umgebende Welt.

*Personal avowals*

- The theory of everything boils down to the interconnectedness of everything. We spoke of the butterfly wings, and we spoke of energy. [...] We realized that the one thing that is missing in our society today is feminine energy. [...] Feminism is failing us. It is failing us since we are thinking we are at war with something. [...] It is only when masculine and feminine energy are properly balanced that we can truly create that light that we all want. Video presentation by Annette Jahnke (1962) South African photographer, artist, world traveller offering the project "Searching for Galileo", public speaker, author, Curiosity preview, sponsored by the Michelangelo Hotel, Sandton, South Africa, 30. November 2014, YouTube film, minute 10:04, 14:09 minutes duration, posted 27. December 2014

Perhaps there is a pattern set up in the heavens for one who desires to see it, and having seen it, to find one in himself. Plato: Ancient Greek pre-Christian founder of the occidental philosophy, writer, Platonic Socrates: The Republic; 36 BC

It is surely harmful to souls to make it a heresy to believe what is proved. Galileo Galilei: (1564-1642) Italian physicist, mathematician, astronomer, philosopher, aphorism

That which is Below corresponds to that which is Above, and that which is Above corresponds to that which is Below, to accomplish the miracle of the One Thing. Emerald Tablet: of Hermes Trismegistus, translated by Dennis W. Hauck, cited in: Nicki Scully: US American ceremonialist, healer, metaphysical teacher, shaman, lineage holder in the Hermetic Tradition, author, Alchemical Healing. A Guide to Spiritual, Physical, and Transformational Medicine; S. 321, Bear & Company, Rochester, 30. September 2003

The last 30 years is a very unusual period in the history of fundamental physics and cosmology. There's confusion, and maybe even a certain amount of fear. People are wedded to these ideas, because they grew up with them. Scientists don't like to change ideas unless they're forced to. They get emotionally attached to it. When an idea is looking shaky, they go into defensive mode. If you're working on something besides inflation, you find yourself outside the social network, and you don't get many citations. Only a few brave souls are willing to risk that. Paul Steinhardt, Ph.D.: (1952) US American professor of theoretical physics, cosmologist, co-founder and director of the Center for Theoretical Sciences, Princeton university, cited in: essay In the beginning. Cosmology has been on a long, hot streak, racking up one imaginative and scientific triumph after another. Is it over? presented by the philosophical and cultural online magazine Aeon, Ross Anderson: US American senior editor at The Atlantic; edited by Birgid Hains, 12. May 2015

The very attempt to divide the One substance (still magnetic or electrical) into its two poles, such as when we are taught that opposites attract (Coulomb's Law), but if this was so, then opposite poles of magnets (Stars, Planets and Moons) would be at their center not their ends. When the positive pole of a magnet (gravity bar) is brought into contact with the negative pole of another magnet, the effect that we think of as attraction is one of 'voidance'. It is a cessation of opposition or power to manifest anything. Polarity utterly ceases at this point and one opposite extends to each opposite end (of the combined magnets), each getting away from and through the other, spirally, as far as they can. To say that opposites attract each other therefore is the equivalent to saying that North attracts South, inward attracts outward, wetness attracts dryness or that darkness attracts incandescence. Walter Russell: (1871-1963) US American polymath, natural philosopher, mystic, architect, painter, sculptor, builder, author (unified theory in physics and cosmogony), The Secret of Light; S. 155, University of Science and Philosophy, 3rd edition 1994

We are taught that opposites attract (Coulomb's Law), but if this was so, then opposite poles of magnets (Stars, Planets and Moons) would be at their center not their ends. When the positive pole of a magnet (gravity bar) is brought into contact with the negative pole of another magnet, the effect that we think of as attraction is one of 'voidance'. It is a cessation of opposition or power to manifest anything. Polarity utterly ceases at this point and one opposite extends to each opposite end (of the combined magnets), each getting away from and through the other, spirally, as far as they can. To say that opposites attract each other therefore is the equivalent to saying that North attracts South, inward attracts outward, wetness attracts dryness or that darkness attracts incandescence. Walter Russell: (1871-1963) US American polymath, natural philosopher, mystic, architect, painter, sculptor, builder, author (unified theory in physics and cosmogony), The Secret of Light; S. 155, University of Science and Philosophy, 3rd edition 1994

For the last four hundred years, an unstated assumption of science is that human intention cannot affect what we call "physical reality." Our experimental research of the past decade shows that, for today's world and under the right conditions, this assumption is no longer correct. We humankind and Planetary Science continues to expand the proof of this. William Tiller, Ph.D.: US American professor emeritus of the Department of Materials Science and Engineering, Stanford University, researcher, consciousness teacher, consultant, author, mission statement on Tiller's website tillerfoundation.com, undated

On this stream, one may see an ever-changing pattern of vortices, ripples, waves, splashes, etc., which evidently have no independent existence as such. Rather, they are abstracted from the flowing movement, arising and vanishing in the total process of the flow. Such transitory subsistence as may be possessed by these abstracted forms implies only a relative independence or autonomy of behaviour, rather than absolutely independent existence as ultimate substances. David Bohm: (1917-1992) German-born US American leading theoretical quantum physicist, philosopher, author, Wholeness and the Implicate Order; S. 48, Routledge & Kegan Paul, London, Boston, 1980

To meet the challenge before us our notions of cosmology and of the general nature of reality must have room in them to permit a consistent account of consciousness. Vice versa, our notions of consciousness must have room in them to understand what it means for its content to be 'reality as a whole.' The two sets of notions together should then be such as to allow for an understanding as to how consciousness and reality are related. David Bohm: (1917-1992) German-born US American leading theoretical quantum physicist, philosopher, author, Wholeness and the Implicate Order; Introduction, Routledge & Kegan Paul, London, Boston, 1980

The questions you are asking are already happening on their own, and you become aware of 'Oh, I just asked that' 1/10,000 of a second after the phenomenon. With full enlightenment, that 1/10,000 of a second [delay] disappears, and...
suddenly you are transformed into a different dimension of existence. The delay between a *that* and a *me* disappears, and that which you are is all there is. Interview with + David R. Hawkins, *Conversations about the Teacher and the Student* part 3 of 3, presented by the US American *Four Corners Magazine*.

• **Question:** What is the real difference between physical and nonphysical reality frames? How does one relate to the other?

  **Answer:** Fundamentally none! It is a matter of *perspective*.

• **THE BOTTOM LINE**

  • Parallel universes are not a theory, but a prediction of certain theories.
  • Eternal inflation predicts that our Universe (the spherical region of space from which light has had time to reach us during the 14 billion years since our Big Bang[*]) is just one of infinitely many universes in a Level I multiverse: where everything that can happen does happen somewhere.
  • For a theory to be scientific, we need not be able to observe and test all its predictions, merely at least one of them. Inflation is the leading theory for our cosmic origins because it's passed observational tests, and parallel universes seem to be a non-optional part of the package.
  • Inflation converts potentialsity into reality: if the mathematical equations governing the cosmos has achieved wonders in recent centuries. It has enlarged the world we can see and think about by ontological orders of magnitude. Cosmology wrenched the Earth from the centre of the Universe, and heaved it, like a discus, into its whirling orbit around one unremarkable star among the billions that speed around the black-hole centre of our galaxy, a galaxy that floats in deep space with billions of other of them colliding and combining, before they fly apart from each other for all eternity. Art, literature, religion and philosophy ignore cosmology at their peril. Essay *In the beginning. Cosmology has been on a long, hot streak, racking up one imaginative and scientific triumph after another. Is it over?*, presented by the philosophical and cultural online magazine *Aeon*.
  • **Galileo's friend** Johannes Kepler [*1571-1630*] began studying the planets, until he knew their movements well enough to establish his three laws of planetary motion. The third of these laws lodged itself in the extraordinary mind of Isaac Newton, and played muse to his universal law of gravitation, a theory whose philosophical import cannot be overstated. With a single, elegant equation, Newton explained the orbits of the planets and the falling of apples, and in doing so, dissolved Aristotle's distinction between Earth and Heaven. Newton showed that both realms belonged to the same jurisdiction. The cosmos was one. Essay *In the beginning. Cosmology has been on a long, hot streak, racking up one imaginative and scientific triumph after another. Is it over?*, presented by the philosophical and cultural online magazine *Aeon*.

• **The biophysicist Jeremy England** made waves in 2013 with a new theory that cast the origin of life as an inevitable outcome of thermodynamics. His equations suggested that under certain conditions, groups of atoms will naturally restructure themselves so as to burn more and more energy, facilitating the incessant dispersal of energy and the rise of "entropy" or *disorder* in the universe. England presented this restructuring effect, which he calls dissipation-driven adaptation, fosters the growth of complex structures, including living things. The existence of life is no mystery or lucky break, but rather follows from general physical principles and "should be as unsurprising as rocks rolling downhill.* Article *First Support for a Physics Theory of Life*, presented by the independent online publication *Quanta Magazine*.

In Walter's Theory of Everything (TOE) the universe is shaped as a giant double bubble expressing a Lorenz attractor dynamic oscillating between its two basins of attraction.

1. The familiar domain, the linear physical world – above the Planck constant level – is the known pole of gravity.
   - It has 3D space carrying 3D matter as tardyon particles / 1D time (spacetime) carrying 1D energy as waves going up to the speed of light.
   - The single giant mind (unified field) is vast energetic cloud dwells in the linear realm, powered by tachyonic energy.

2. The hidden domain, the nonlinear nonphysical world – below the Planck level – is the lost pole of gravity.
   - It has 3D time (timespace) carrying 3D energy waves going from the speed of light up to infinite speed / 1D space carrying antimatter as tachyon particles.

The 1D time in the linear bubble and the 1D space in the nonlinear bubble bond at the Planck level interface resulting in a polarized 1D axis stretching across both domains.

According to Katya Walter's TOE human life happens within twin bubble domains – in a Lorenz oscillator caught in a giant Klein bottle universe built by a nonlinear fractal chaos. It is being influenced by the universal unified mind combined with the tiny human minds. This is assembling the continual chaotic flow of events that humans experience.

The fractal origin of the universe builds a double bubble shape of giant conjoined twins. In its giant Lorenz oscillator, a strange attractor shape employs a fractal master code in the primal causative event prior to the creation of the Four great primals:

- **0. Space**  
  GOD  
  O-1-1  
  The Tao gave birth to One.

- **1. Energy**  
  Pattern – Pater  
  1-2  
  The One gave birth to Two.

- **2. Matter**  
  Matern – Mater  
  2-3  
  The Two gave birth to Three.

- **3. Time**  
  Creation unfolding  
  3-5  
  The Three gave birth to all of creation.

**Note:** The organic growth number pattern expressed in the Fibonacci numbers: 0–1–1–2–3–5 and the Golden ratio.

The 11 dimensions of the double bubble universe comprise three cooperating subsets each of which containing both space and time, matter and energy.

Events subject to abrupt, seemingly random changes, emerging in a nonlinear progression are created by mind and matter.

- Beyond the ego's limits men can tap into the antimatter realm below the Planck level. In dreams, sleep, meditation, remote viewing, channeling, and other altered states of consciousness can humans draw from the domain of giant universal mind, the Akashic record, the Collective unconscious, the Oversoul, the archetypes, spiritual teachers, ascended masters. The tachyonic data bank (huge mind) stores fractal patterning. It contains the past, present, and speculations on the potential future of the universe.
- The ability to tap into awareness beyond time, space, or the grave is called an evidence of the "soul". As "souls" humans exist in fractal patterns within the vast tachyonic cloudbank below the Planck level in the universal mind itself.
- After the demise of the physical body in the secondary level the "soul" continues to live in the fundamental domain.
- The ancients named the cycling fractal iterations of the soul by the term "reincarnation".

Perhaps there is a pattern set up in the heavens for one who desires to see it, and having seen it, to find one in himself. Plato (427-347 BC) Ancient Greek pre-Christian founder of the occidental philosophy, writer, Platonic Socrates: The Republic, 360 BC

Cubic cosmology as opposed to spheric cosmology – Wallace Black Elk

At his last seminar in Neuss, Germany, in June 1998, Native American Dakota Sioux medicine elder Wallace Black Elk (1921-2004) taught the following cosmology:

Referring to the pre-Columbian era there was a spheric earth wherein all creatures lived in harmony. When the white conquerers from Europe arrived on Turtle Island the world view embedded and flowing within the circle/sphere as held by the Natives has been superseded by the structured goal-oriented square/cube. The box in which the white conqueror types prefer to live in consists of four walls with no windows and no door availed. Both the floor and the ceiling offer no exit either, nor do they allow to peek outside the box.
Before our white brothers arrived to make us civilized men,

- we didn't have any kind of [no] prison. Because of this, we had no delinquents.

Without a prison, there can be no delinquents.

- we had no locks nor keys and therefore among us there were no thieves.

Because of this, we had no thieves.

- When someone was so poor that he couldn't afford a horse, a tent or a blanket, he would, in that case, receive it all as a gift.

Therefore we were not able to cheat and swindle one another.

- We were too uncivilized to give great importance to private property.

We didn't know any kind of [no] money and consequently, the value of a human being was not determined by his wealth.

- We had no written laws laid down, no lawyers, no politicians, therefore we were not able to cheat and swindle one another.

Because of this, we had no lawyers, no politicians.

- We were really in bad shape before the white men arrived and I don't know how to explain how we were able to manage without these fundamental things that (so they tell us) are so necessary for a civilized society.

We couldn't afford a horse, a tent or a blanket.

Another is it over?

    The pyramids were built in a Golden Age, where the sacred feminine in balance with the sacred masculine was honored.
  - A New Chronology, episode 5 of 5, 44:39 minutes duration
    The chronology of traditional Egyptology dates the emergence of the pyramids 5000 years back. Evidence shows that they came into being around 36-34,26,000 years ago.

- Audio interview with Carmen Boulter, Ph.D., Canadian professor of linguistics, Educational Research, University of Calgary, Canada, researcher on the sacred feminine in ancient Egypt and Greece, educator, author, Carmen Boulter Discoveries after the Pyramid Code, presented by Earth Ancients, host Cliff Dunning, YouTube film, 1:35:17 duration, posted 23. January 2016
- Video Skype interview with Carmen Boulter, Ph.D., Canadian professor of linguistics, Educational Research, University of Calgary, Canada, researcher on the sacred feminine in ancient Egypt and Greece, educator, author, My Big TOE. The Complete Trilogy, part 1 of 18, 5:53 minutes duration, posted 11. June 2016

"In the Bosnian tunnel system they are finding all kinds of things that come from matriarchal times some 40,000 years ago." Minute 41:40

5 Wormhole

6 3:1 Principle

7 On this stream, one may see an ever-changing pattern of vortices, ripples, waves, splashes, etc., which evidently have no independent existence as such. Rather, they are abstracted from the flowing movement, arising and vanishing in the total process of the flow. Such transitory subsistence as may be possessed by these abstracted forms implies only a relative independence or autonomy of behaviour, rather than absolutely independent existence as ultimate substances.

8 Down the Rabbit-Hole, title of chapter 1 of the book Alice’s Adventures in Wonderland, used as a metaphor for adventure into the unknown

9 The questions you are asking are already happening on their own, and you become aware of ‘Oh, I just asked that’ 1/10,000 of a second after the phenomenon. With full enlightenment, that 1/10,000 of a second [delay] disappears, and suddenly you are transformed into a different dimension of existence. The delay between a that and a me disappears, and that which you are is all there is.
