Out of Birmingham: Towards a More Peripatetic Cultural Studies

Ben Highmore

ABSTRACT

This piece of writing is an experiment in digressive and peripatetic cultural studies that follows a thought path around the city of Birmingham in England. Instead of constructing an argument it tries to perform a mode of enquiry that could be sensitive to the 'simultaneous non-synchronicity' of culture, and could craft a form of writing adequate to history's torn and crumpled state. It doesn't try to claim preferential treatment for such a practice, merely a marginal place for such a practice within cultural studies.

based on age, class, race and gender intersected with dominant ways of seeing. Hall got the best out of his colleagues and raised the bar for what could be achieved by graduate students. Given the University of Birmingham’s earlier hostility towards Hall and the Centre there was an irony to its decision in 2011 to include the Centre in its Blue Plaque scheme in celebration of ground-breaking academic work undertaken at Birmingham. The Peripatetic school may have been more favourable to the development of medicine, as of other departments of natural knowledge, than any other; but there is no evidence that any of the philosophical schools had important influence on the progress of medicine. DICAEARCHUS, of Messene in Sicily, Peripatetic philosopher and pupil of Aristotle, historian, and geographer, flourished about 320 B.C. He was a friend of Theophrastus, to whom he dedicated the majority of his works. After reading the remains of the Peripatetic school, the Greek commentators should be further studied in this edition. He came to Athens towards the end of the 2nd century A.D., became head of the Lyceum and lectured on peripatetic philosophy.
