Title: Les Oiseaux des Régions Forestières du nord-est du Gabon. Volume 1. Écologie et Comportement des Espèces
Author: BROSSET, André; ERARD, Christian
Description: This first volume summarizes the observational data obtained by the CNRS/MNHN team, from 1963 to 1985, in the Makokou-Belinga area, NorthEast Gabon. Four hundred and twenty four species of birds were recorded in this area, and many of them were photographed, tape-recorded, or collected for identification purposes. Nine other species were seen, but not definitely identified. Three hundred and sixty three bird species were recorded on the 2 km² of the M'Passa field station alone. Detailed information is given for most of the species on the status, habitat preferences, abundance, life-history characteristics, diet and reproduction. A second volume will deal with more general problems of community and population ecology. Comparisons will then be made with the results of similar studies carried out elsewhere in the humid tropics
Publisher: Société nationale de protection de la nature et d'acclimatation de France, Paris (FRA)
Date: 1986
