And as traditional teaching styles evolve with the advent of differentiated instruction, more and more teachers are adjusting their approach depending on their students' learning needs. But there are a few fundamental teaching styles most educators tend to use. Which one is yours? Although it is not the teacher's job to entertain students, it is vital to engage them in the learning process. Selecting a style that addresses the needs of diverse students at different learning levels begins with a personal inventory—a self-evaluation—of the teacher's strengths and weaknesses. As they develop their teaching styles and integrate them with effective classroom management skills, teachers will learn what works best for their personalities and curriculum. Our learning begins by reading books. Books open new horizons in front of us. But sometimes the hardest and most important lessons we learn in life come from our participation in different situations. The things we learn in real-life can never be learned through anything else. In addition to this, Knowledge gained through experience help us to understand more clearly what we read in the book. For example, my friend Junaid told me that when he wants to go somewhere for dinner, outing or a strange place he also uses his street directory for directions rather than GPS because next time it will be easy to go to the same place without a street directory.
