In this chapter Professor Rustin discusses the method of Work Discussion. This is a technique of self observation for clinical practitioners where individual practitioners observe themselves while actively involved in work situations and reflect on the implications of what is seen and experienced. A Work Discussion seminar supervises and reflects on each member’s observations in order to share knowledge between practitioners with similar work situations. He discusses the ways in which Working discussion might become a means of improving professional practice and policy-making outside of ‘continuing professional development’ or CPD programmes. The chapter concludes that there is scope for...

The debate on capital flow management policies. OECD Working Papers should not be reported as representing the official views of the OECD or of its member countries.

Turning to policy discussions, it reviews the ongoing debates on the role of capital controls and more generally capital flow management (section V) and the main issues related to policy coordination (section VI). The decoupling between gross and net flows and its implications. 

Abstract. In this chapter Professor Rustin discusses the method of Work Discussion. This is a technique of self observation for clinical practitioners where individual practitioners observe themselves while actively involved in work situations and reflect on the implications of what is seen and experienced. A Work Discussion seminar supervises and reflects on each member’s observations in order to share knowledge between practitioners with similar work situations.

of the Resource Curse: Implications for Policy and Research. Ivar Kolstad and Arne Wiig. September 2009. concludes that more work is needed to identify more precise policy implications in terms of the institutions required to mitigate the effects of the resource curse and the reform of such institutions. on theoretical analysis, often without analysing policy implications. In this paper, we focus on political economy models of the resource curse and their research and policy implications. The purpose of the paper is not to produce new theoretical or empirical results, but rather to provide an overview of political economy-based models and indicate some of their policy and research implications. We will
