Abstract

Tourism sector in the Regency / City in the province of Bali is more dominant influence on regional income. This study aims to analyze the performance of economic development based on tourism at Regency / City in the province of Bali in the period 2005-2014 by observing the macro economy of Bali Province through secondary data. Data analysis technique used in this research is qualitative analysis techniques descriptive analysis techniques that are present data in graphical form associated between theory and empirical in the field and then taken to a conclusion. The research found that: 1) During 2005-2014, Badung increased revenue (PAD) is much higher compared to other regencies / cities in the province of Bali as a result of the many hotels and accommodation built in the district of Badung, as well as the Airport of the Only in Bali Province is located in Badung, 2) During 2005-2014, an increase in Gini Ratio in Regency / City in the province of Bali, 3) During 2005 to 2014, the increase in the Regency / City in the province of Bali is not proportional to the increase PAD District / City in the province of Bali.
