ABSTRACT

No New Religious Movement has been a subject of more public interest and of more heated discussions in Germany during the last two decades than Scientology. I first became interested in this debate in the early Eighties, but only in 1996/1997 - after completing a similar project about Theosophy and Helena Blavatsky - I seriously started to search for available material on Hubbard and the movement he founded. Only then I became aware of the rather paradoxical situation in Germany, that there exists a large New Religious Movement (whose status as a religion nevertheless is doubted by some) which is being discussed on German TV almost every week, which forms a topic of forensic debate in many legal proceedings, and which is the one movement treated most extensively in the official report on New Religious Movements published by the German parliament (Endbericht der Enquete-Kommission des Deutschen Bundestages "Sogenannte Sekten und Psychogruppen", 1998) - but nevertheless has almost never been treated on an academic level of research.
Lafayette Ronald Hubbard (March 13, 1911 – January 24, 1986), better known as L. Ron Hubbard, was an American pulp fiction author. He wrote in a wide variety of genres, including science fiction, fantasy, adventure fiction, aviation, travel, mystery, western, and romance. He is perhaps best known for his self-help book, the #1 New York Times bestseller Dianetics: The Modern Science of Mental Health (first published in 1950), and as the founder of the Church of Scientology. Differing accounts of L. Ron Hubbard's life, (critics charge Scientology with being a cult of personality, with much emphasis placed on the alleged accomplishments of its founder). Scientologists claim that government files, such as the FBI, are loaded with forgeries and other false documents detrimental to Scientology. L.
