In the past twenty years, sexually transmitted diseases (STDs), including human immunodeficiency... Because the average time between exposure to HIV and diagnosis of AIDS is approximately ten years. AIDS identified in individuals ages 20-29 years ordinarily represents exposure during the teen years. By contrast, a 1989 study of Seventh-Day Adventist youth in private Adventist secondary schools (the "Valuegenesis Study") found that, overall, only 21.6% of males and females in grades nine through 12 reported being sexually active (Benson & Donahue, 1990). The study is based on a subset of the Valuegenesis study data. In that study, a 20 • How to get your discounted copy of Valuegenesis Ten Years Later: A Study of Two Generations by V. Bailey Gillespie and Michael J. Donahue (Offer good until February 28). Valuegenesis Information You Can Use. We want to wish you the best new year ever!
And to start 2004 out right, we want to share with you information from our newest book about Valuegenesis2. So we’ve dedicated this UPDATE, with its new design and special content, to let you know some of the things that you’ll find inside. Our book is at the press, and we expect it to be ready for distribution in about four weeks. What Generation are you? Millennial, Gen X, Gen Z, Baby Boomer. A listing and short description of each generation. You have two choices - pick a trade or get the right college education. Low skilled jobs will continue to disappear and you can not raise a family on the income from a low skilled job. You either need skills or education. The effect of 20+ years of offshoring of American jobs is finally felt. Enron - energy trading scams and corporate fraud on a national level. Global warming becoming obvious with unusually severe storms, hotter weather, colder weather, more droughts etc.
