Type: Undergraduate senior honors thesis.
Archival ID: A-334
Degree: Thesis (B.?.)
Department: Honors College

Abstract:
I chose to create a nine week unit plan over insects that is closely aligned with the Indiana Academic Standards. As teachers, we are expected to teach so much information in so little amount of time. Usually, the things that get cut out of the curriculum are Science and Social Studies. It is important for educators to find ways to incorporate Science and Social Studies into their Language Arts and Math curriculum. It is also important that students have the opportunity to learn through observation and discovery. This unit is designed around doing these things. It provides detailed lesson plans and all of the resources necessary to carry out these plans. The plans in this unit integrate Science into other areas of the curriculum in a hands-on, fun, and exciting way.

Suggested articles. Chaos Theory and Probability An Honors Thesis (HONRS 499) by Angelica M. Politano Thesis Advisor Dr. John Emerit Ball State University Muncie, Indiana April 1994 Expected date of graduation: May 1994 J ~ . Purpose of Thesis Books and other literature written on chaos theory, fractals and the uncertainty principle are sometimes difficult for the average reader to understand. As a result, the reader may walk away feeling more frustrated or confused than at the start of their research. Dr. Emerit's colloquium classes on fractals were extremely enjoyable and thought provoking, but not be... a distance of one unit. There is no way to accurately predict which direction will be taken. The second step, like the first step, has the same freedom to go in any direction.
