Abstract

A critical challenge to Scotland's new system of government is the making and implementation of public policy. This book offers a comprehensive account of the policy process in contemporary Scotland. There is a review of theories of policy-making, focusing on decentralised systems. The author then identifies the key actors and institutions, patterns of policy making, and the extent of convergence and divergence in comparison with England and other devolved territories. Case studies of policy making in health, higher education, housing, criminal justice, social inclusion and economic development allow the reader to see how policy making works in practice. There is an analysis of financial planning and decision making, and an examination of Scotland's role in UK and European policy networks. Comparisons are made with other devolved governments in Europe and beyond. The book is based on extensive research, including interviews with leaders of interest groups, politicians and officials across the Scottish Government and in the Scottish Parliament, an analysis of spending patterns, an examination of the legislative output, and case studies of policy making.

Paperback. Scotland appears here as an especially interesting case study of the territorialisation of 'policy community' and the embedding of a distinctive policy style.
