Langue du texte
English

Données auxiliaires
Monograph XXIV; -- AATA

Mots clés anglais-sujet
- archaeology
- Pottery analysis, ceramic analysis
- Neutron activation analysis, mineralogy petrography
- Ceramic technology AATA -- AATA
**Résumé**
The papers in this collection are concerned with ceramic studies using a variety of approaches. Although the overall emphasis is anthropological, the book contains a number of technically oriented works. Published in honor of Frederick Matson, the papers in the volume were chosen to reflect his philosophy. An interdisciplinary approach is argued for, with a range of archaeological and analytical methods employed for answering anthropological questions. The book is divided into three sections. The first includes papers which are concerned with the role of ancient pottery within the socioeconomic and physical environments in which it was produced. The second is comprised of ethnoarchaeological studies of various stages in the ceramic manufacturing process. The third section includes papers in which some form of technical analysis of pottery is carried out. For individual abstracts of relevant articles, see 22-1170, 22-1172, and 22-1204. -- AATA
